The Normal Distribution

Note: This PowerPoint is only a summary and your main source should be the book.

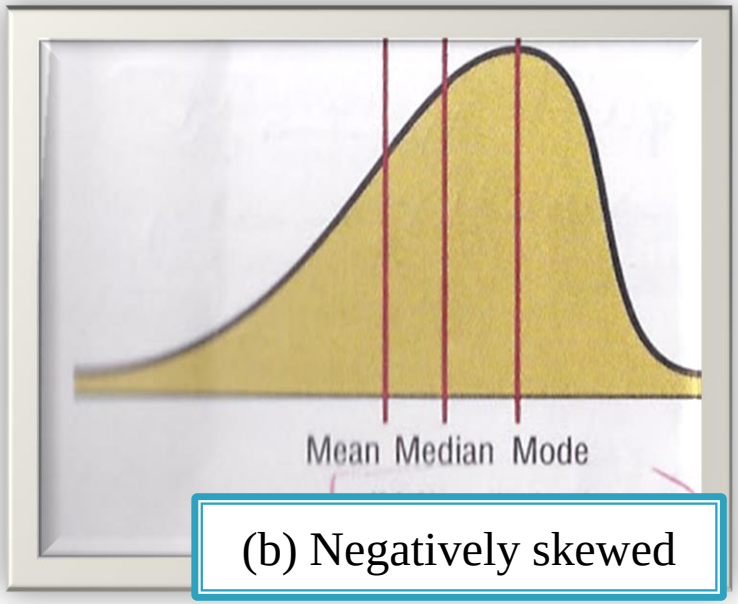
Introduction

- Normal Distribution.
- Applications of the Normal Distribution.

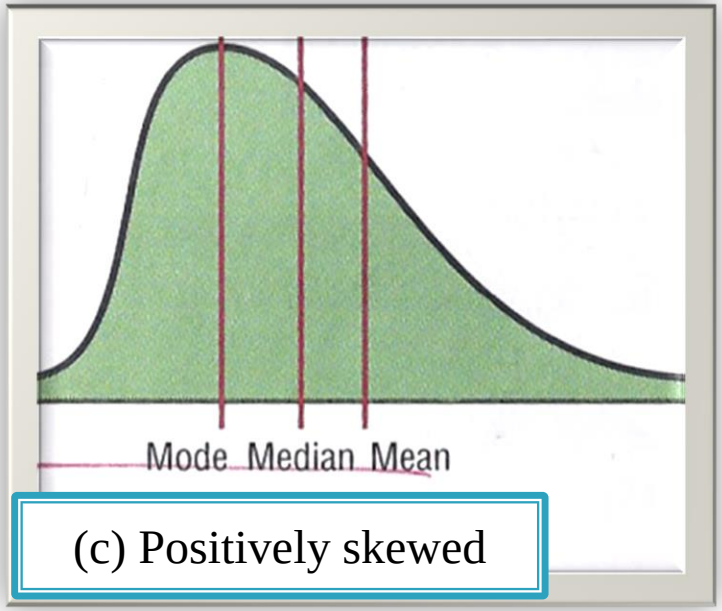
Note: This PowerPoint is only a summary and your main source should be the book.

The Normal Distribution

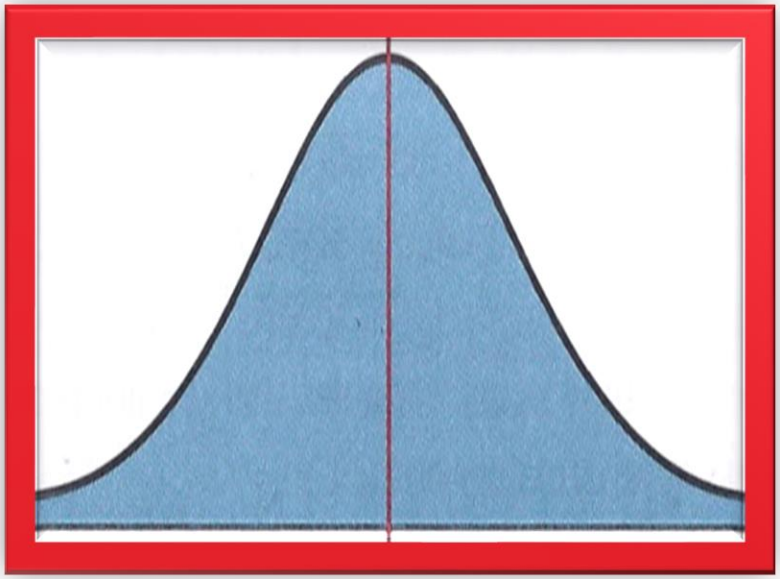
Note: This PowerPoint is only a summary and your main source should be the book.



(b) Negatively skewed

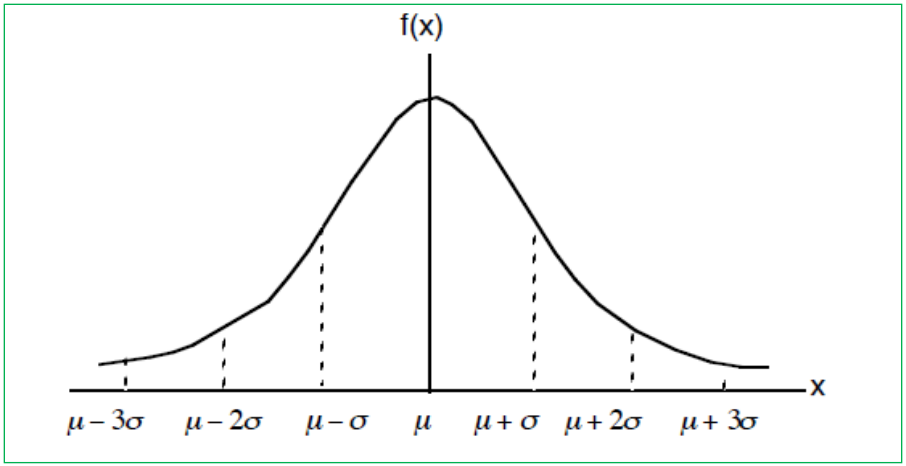


(c) Positively skewed



(a) Normal
Mean =Median=Mode

Note: This PowerPoint is only a summary and your main source should be the book.



- **A normal distribution** is a continuous , symmetric , bell shaped distribution of a variable.

- A normal distribution curve depend on two parameters .

μ ⟶ Position parameter

σ ⟶ shape parameter

Note: This PowerPoint is only a summary and your main source should be the book.

The mathematical equation for the normal distribution:

$$y = \frac{e^{-(x-\mu)^2/2\sigma^2}}{\sigma\sqrt{2\pi}}$$

where

$e \approx 2.718$

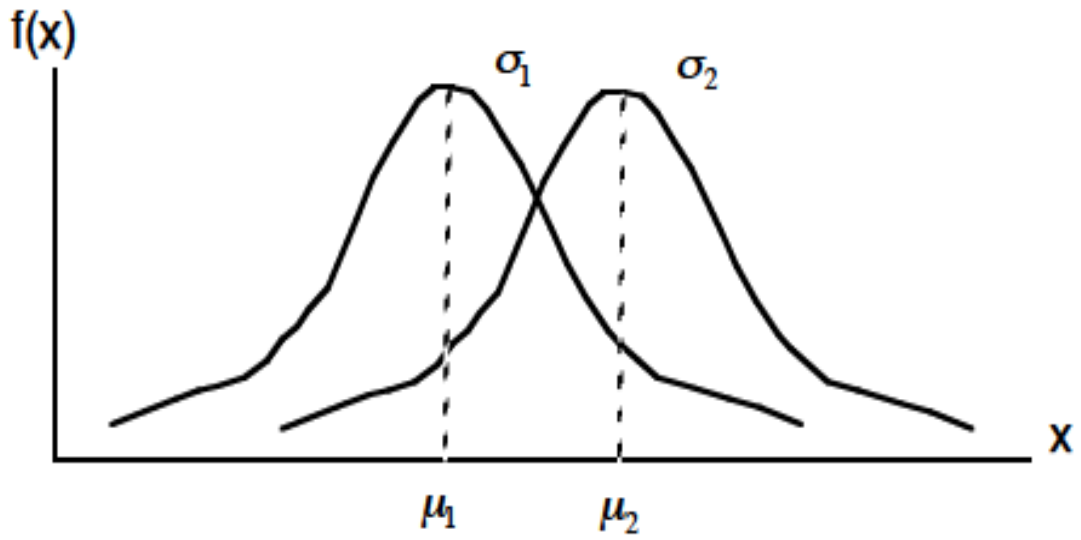
$\pi \approx 3.14$

$\mu \approx$ *population mean*

$\sigma \approx$ *population standard deviation*

Note: This PowerPoint is only a summary and your main source should be the book.

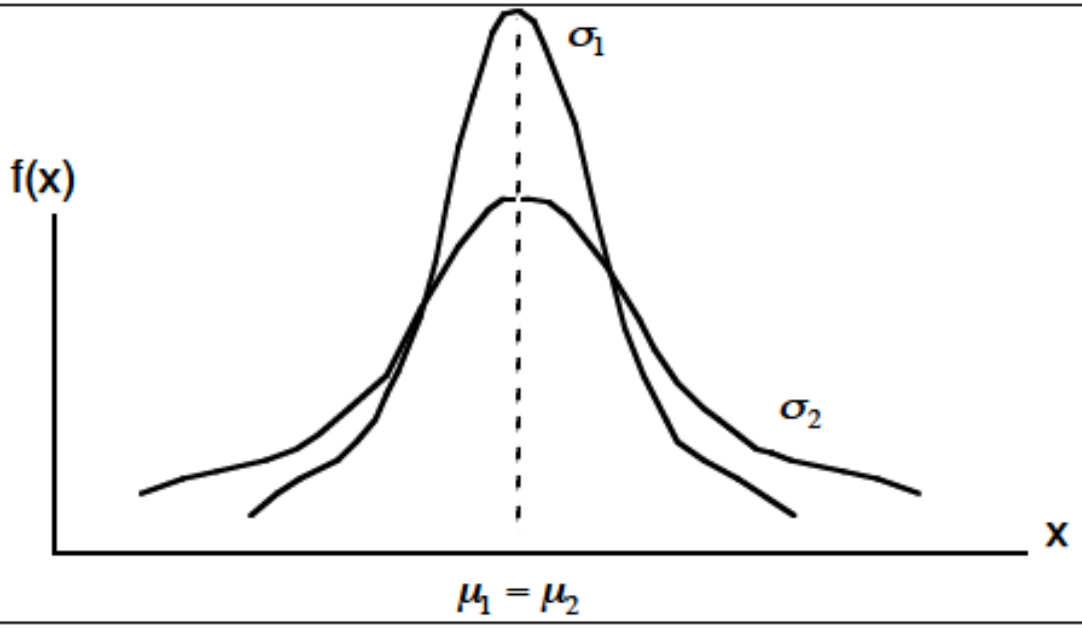
1



Normal curves with $\mu_1 \neq \mu_2$ and $\sigma_1 = \sigma_2$

(1) Different means but same standard deviations.

2

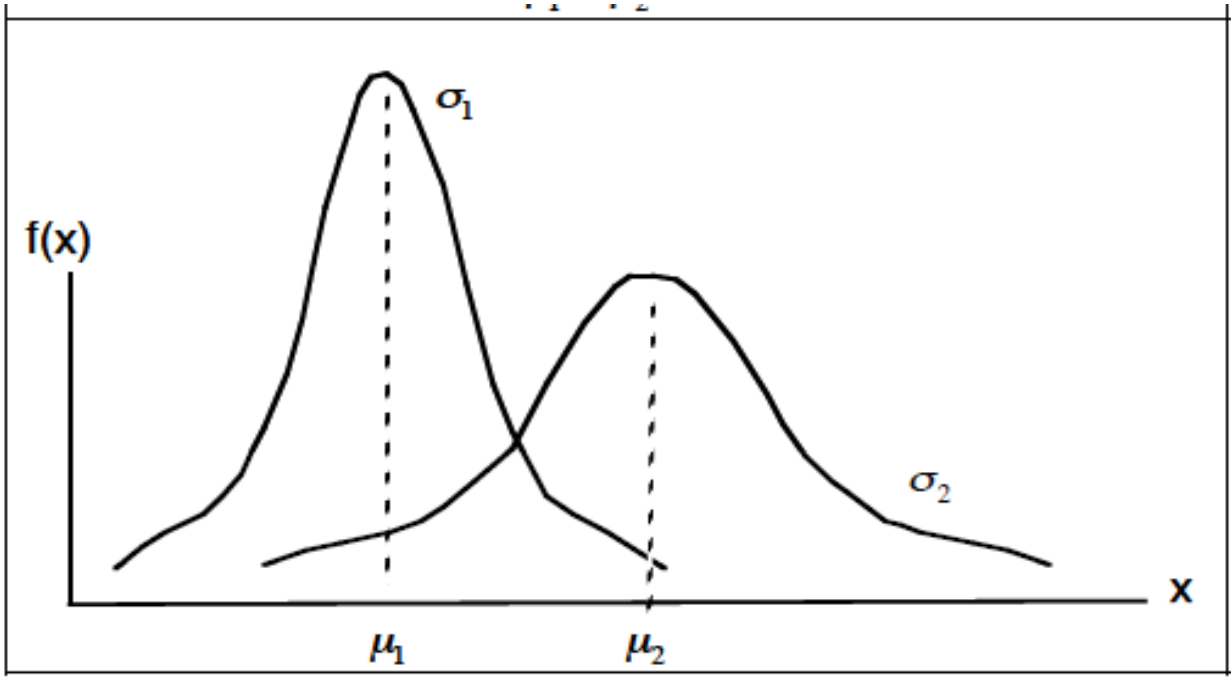


Normal curves with μ1 = μ2 and $\sigma_1 < \sigma_2$

(2) Same means but different standard deviations .

Note: This PowerPoint is only a summary and your main source should be the book.

3

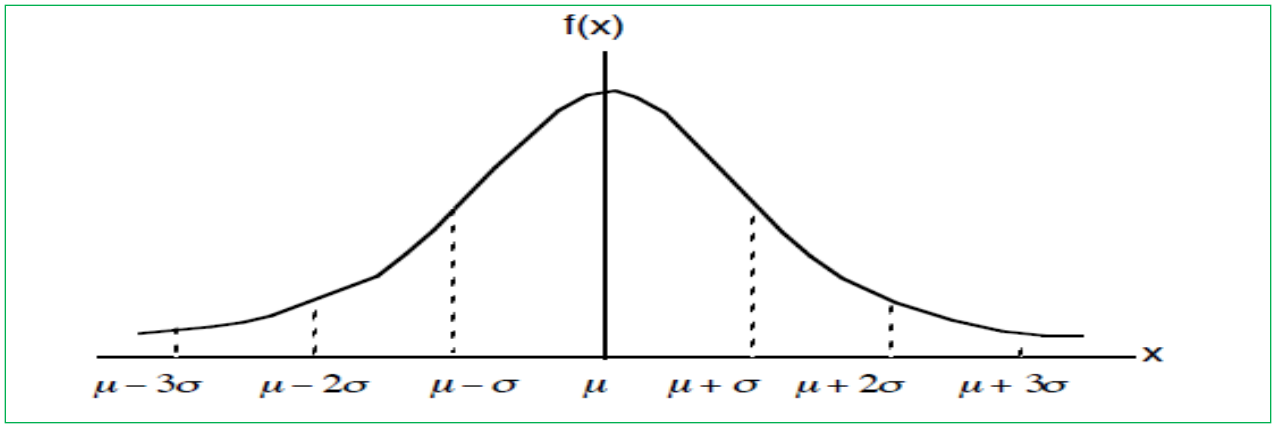


Normal curves with $\mu_1 < \mu_2$ and $\sigma_1 < \sigma_2$

(3) Different means and different standard deviations .

Note: This PowerPoint is only a summary and your main source should be the book.

Properties of the Normal Distribution



- The normal distribution curve is **bell-shaped**.
- The mean, median, and mode are **equal** and located at the center of the distribution.
- The normal distribution curve is **unimodal** (single mode).
- The curve is **symmetrical** about the mean.
- The curve is **continuous**.
- The curve **never touches the *x*-axis**.
- The total area under the normal distribution curve is **equal to 1 or 100%.**

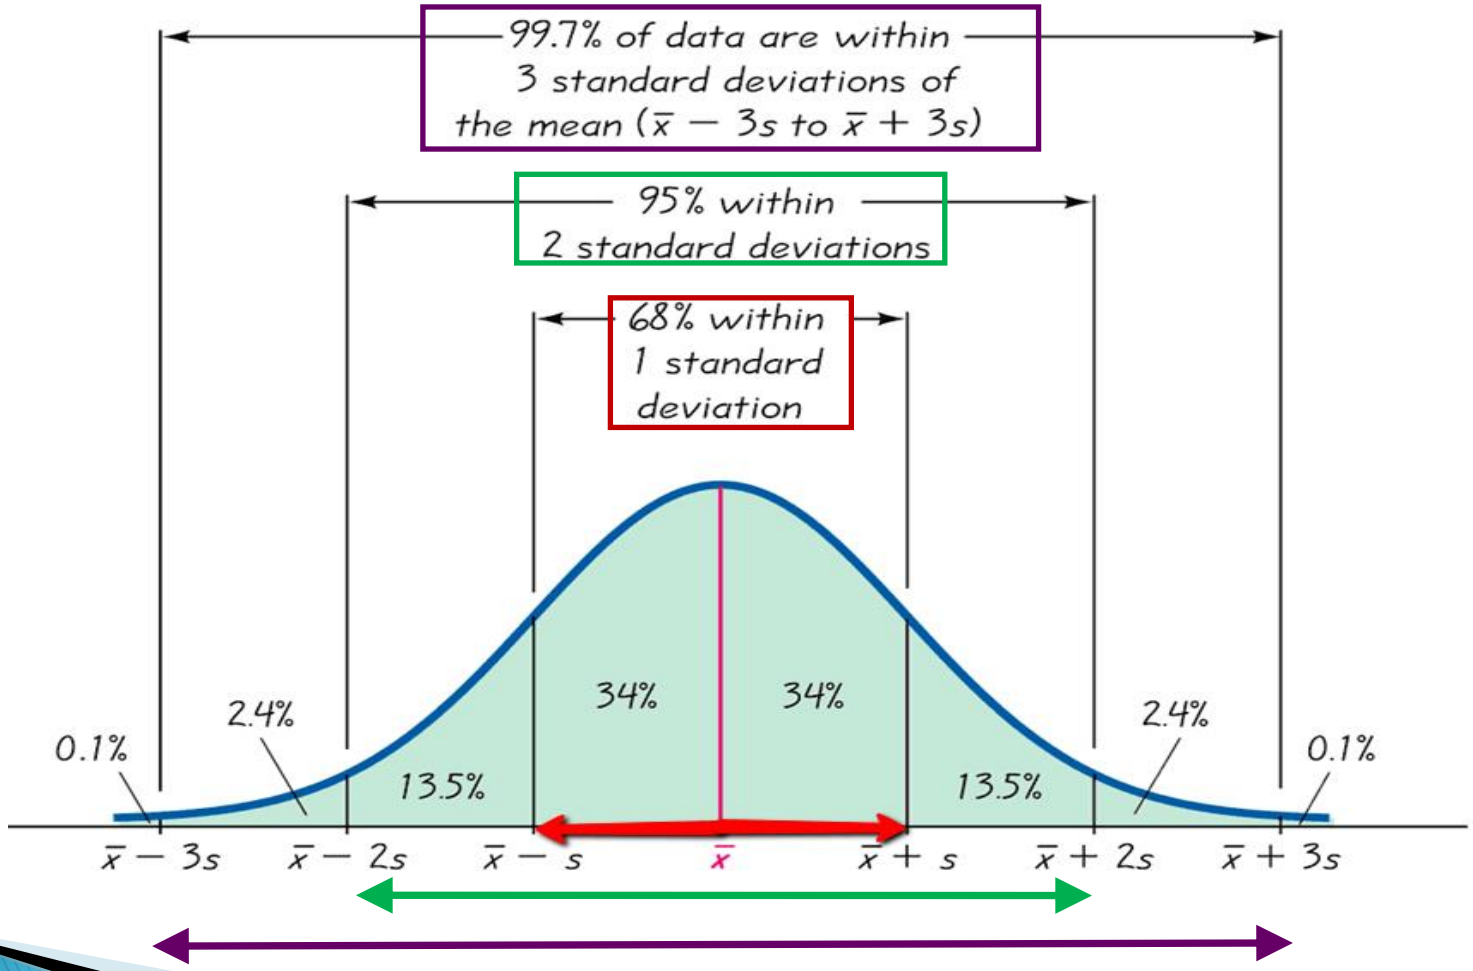
Note: This PowerPoint is only a summary and your main source should be the book.

- The area under **the normal distribution curve** that lies within
  - one standard deviation of the mean is approximately 0.68 (68%). The interval between $(\bar{x} - s, \bar{x} + s)$
  - two standard deviations of the mean is approximately 0.95 (95%). The interval between $(\bar{x} - 2s, \bar{x} + 2s)$
  - three standard deviations of the mean is approximately 0.997 (99.7%). The interval between $(\bar{x} - 3s, \bar{x} + 3s)$

Note: This PowerPoint is only a summary and your main source should be the book.

Empirical Rule: Normal Distribution

(Areas Under the Normal Curve)



Note: This PowerPoint is only a summary and your main source should be the book.

The Standard Normal Distribution

Note: This PowerPoint is only a summary and your main source should be the book.

- The standard normal distribution is a normal distribution with a mean of 0 and a standard deviation of 1.

- The formula for the standard normal distribution is

$$y = \frac{e^{\frac{-z^2}{2}}}{\sqrt{2\pi}}$$

$\mu = 0$

$\sigma = 1$

Note: This PowerPoint is only a summary and your main source should be the book.

- All Normal Distribution can be transformed into standard Distribution.

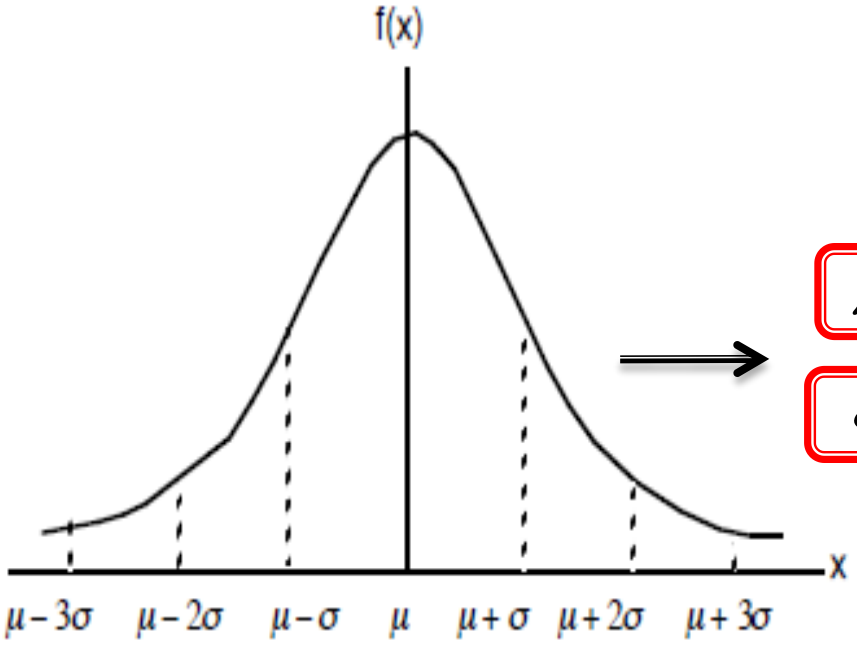
$$z = \frac{value - mean}{standard\ deviation}$$

or

$$z = \frac{x - \mu}{\sigma}$$

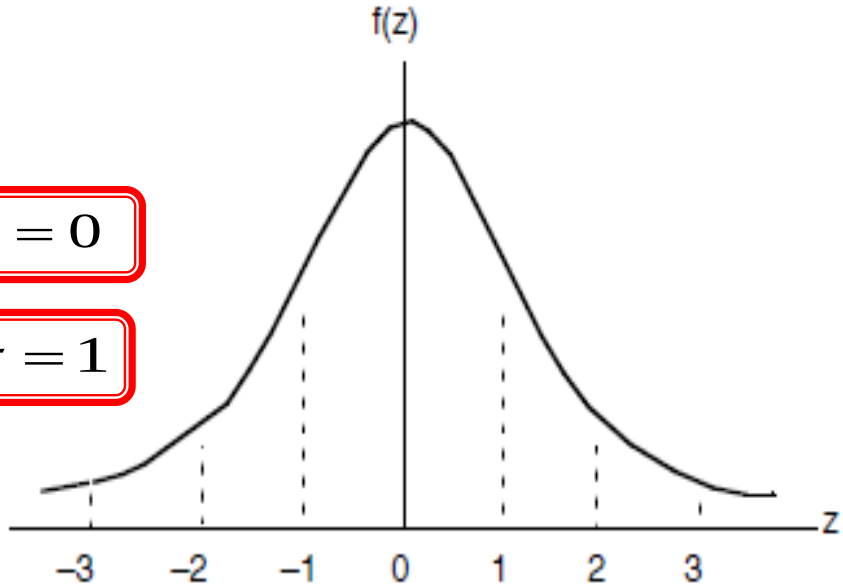
Note: This PowerPoint is only a summary and your main source should be the book.

Empirical Rule: Standard Normal Distribution



$\mu = 0$

$\sigma = 1$



Normal Distribution Curve

Standard Normal Distribution Curve

Note: This PowerPoint is only a summary and your main source should be the book.

- The area under the **standard normal distribution curve** that lies within

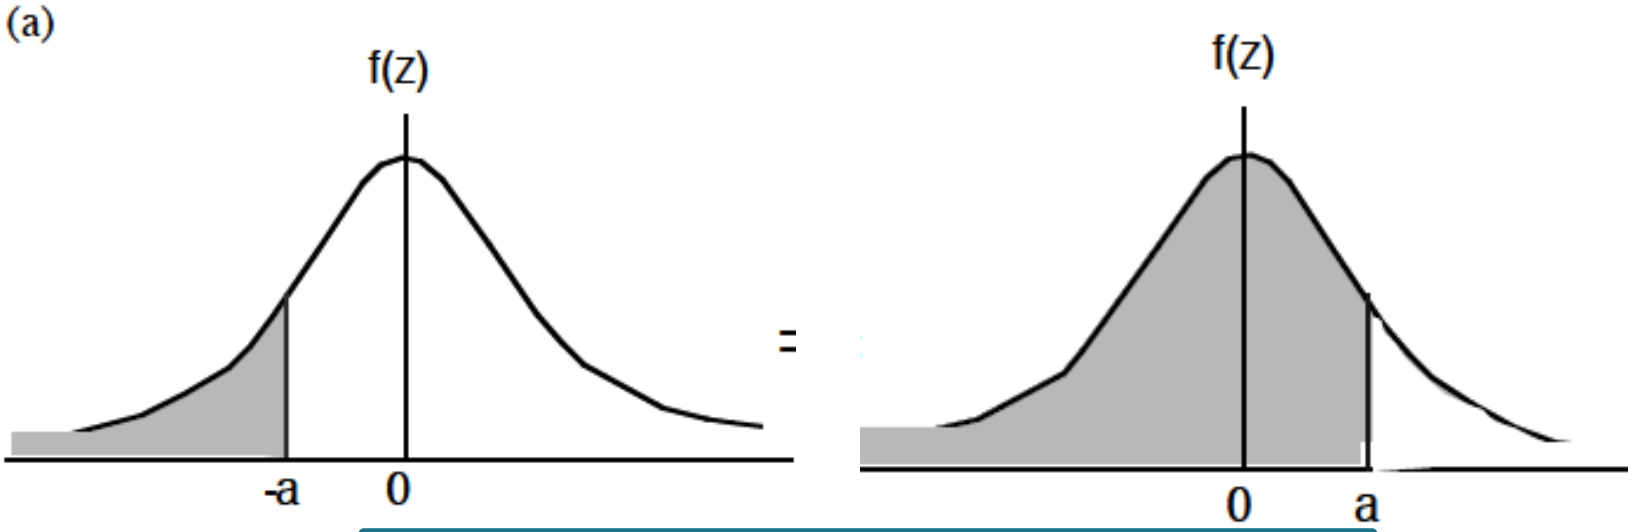
  - one standard deviation of the mean is approximately 0.68 (68%). The interval between (-1,1).

  - two standard deviations of the mean is approximately 0.95 (95%). The interval between (-2,2).

  - three standard deviations of the mean is approximately 0.997 (99.7%). The interval between (-3,3).

Finding Areas Under the Standard Normal Distribution Curve:

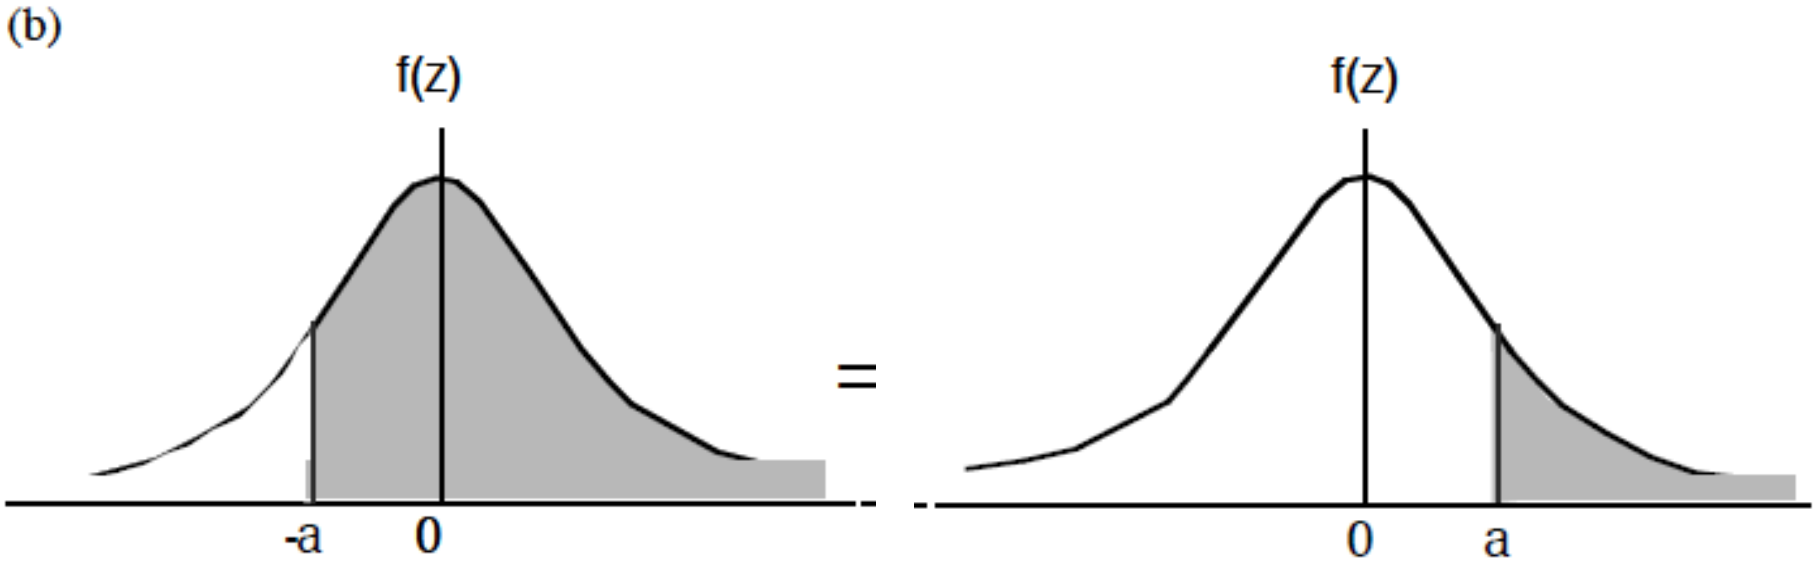
1. To the left of any Z value



$$P(z<-a) = P(z>a) = Q(a)$$

Note: This PowerPoint is only a summary and your main source should be the book.

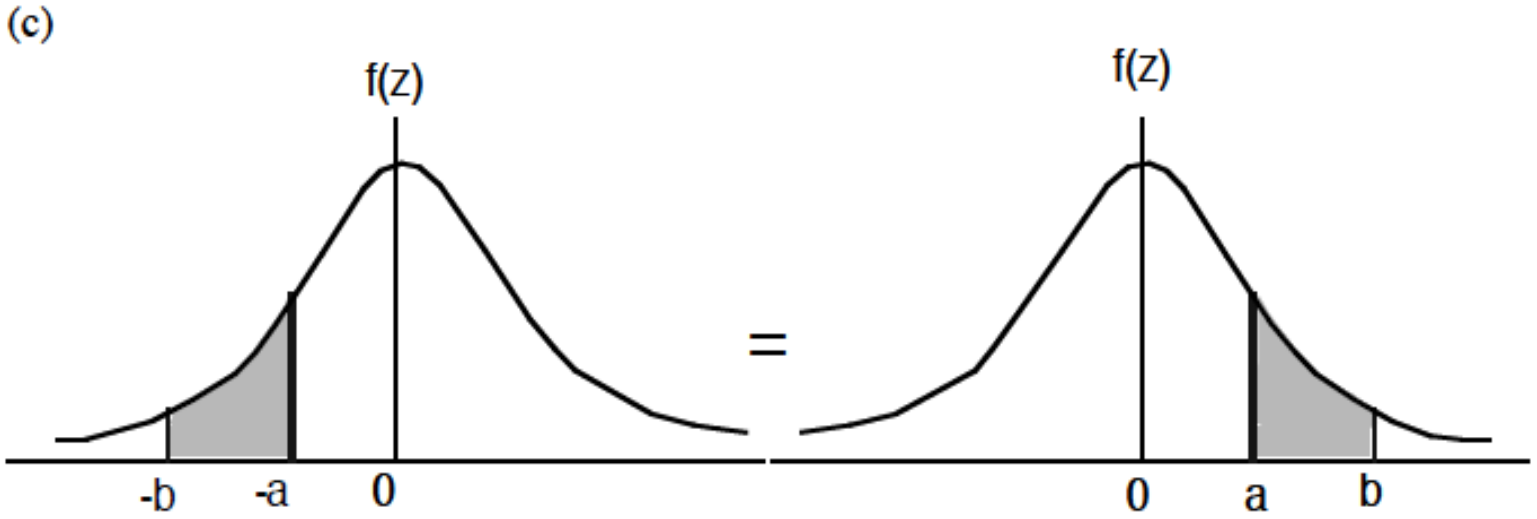
2.To the right of any Z value



$$P(z>-a) = P(z>a) = 1 - Q(a)$$

Note: This PowerPoint is only a summary and your main source should be the book.

3.Between any two Z values



$$P(-b<z<-a) = P(a<z<b) = P(z>a) - P(z>b)$$

$$= Q(a) - Q(b)$$

Note: This PowerPoint is only a summary and your main source should be the book.
